

DAY 6 TASKS

Task 1: Enhance interface design

Today, we focused on six core tasks to enhance the usability and visual appeal of our Finova application:

1. **Enhanced Interface Design:** We polished the UI using Power Apps components and customized the screen styling. We also referenced a clean and professional template (attached) for consistency in layout and design standards.

Budget Planning Studio
Define your financial roadmap with AI-powered insights

Total Budget Configuration

Total Available Budget: \$ 0
Budget Period: Select Period

Project/Department Budget Splits

Marketing	\$ 0	0%
Operations	\$ 0	0%
R&D	\$ 0	0%

+ Add Department

Budget Constraints & Limits

Risk Analysis & Underperforming Areas

Marketing Overspending Pattern

Historical data shows 18% budget overruns in Q3-Q4. Current allocation may exceed limits during peak seasons.

High Risk

R&D ROI Concerns

Current R&D projects showing 12% lower ROI than industry benchmarks. Consider reallocating to higher-performing initiatives.

Medium Risk

Technology Upgrade Delays

Delayed software implementations may impact Q2 productivity targets. Budget reallocation needed for expedited deployment.

Low Risk

AI-Generated Optimization Suggestions

Reduce Travel Expenses by 15%

Implement virtual meeting protocols and optimize travel routes. This will free up \$28K for high-ROI marketing campaigns.

Potential Savings: \$28K

Reallocate Training Budget

Move \$25K from general training to AI/automation skills development. Higher employee retention and productivity gains expected.

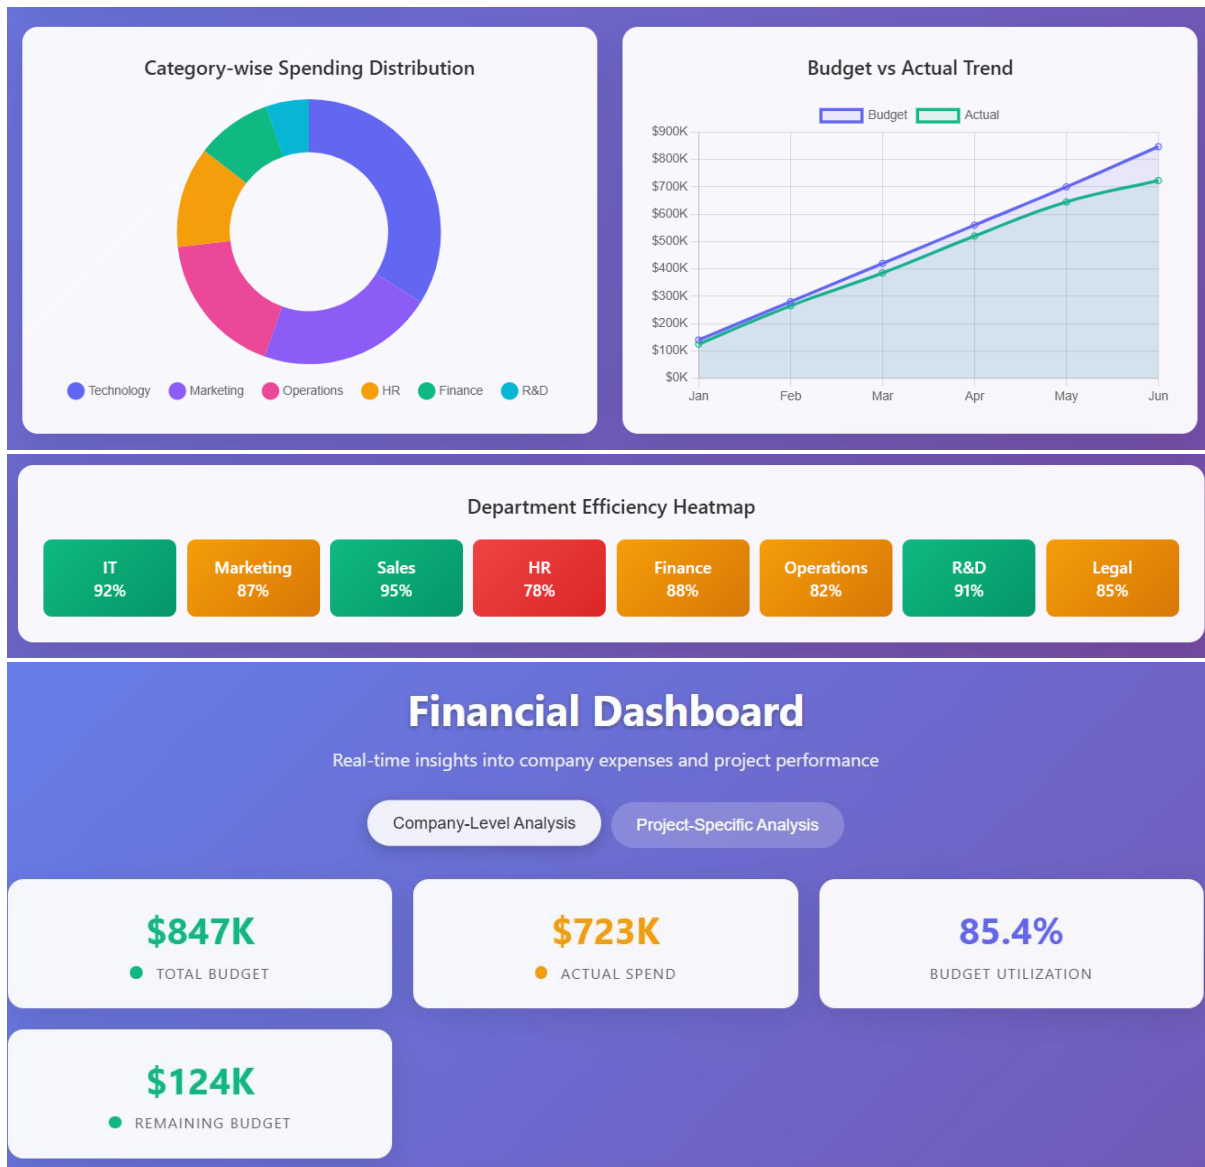

ROI Increase: +22%

Bulk Purchase Optimization

Consolidate office supplies and equipment purchases. Negotiate volume discounts with primary vendors.

Cost Reduction: 12%

2. UI Polish with Power Apps:

Leveraging Power Apps' design tools and layout containers, we refined screen alignments, margins, and form placements. In some areas, custom styling was used for better visual feedback.

3. Improved UX (User Experience):

The app now provides a guided flow where users (businesses) can input financial details easily via structured text boxes and dropdowns. This improves the overall navigation and reduces confusion.

4. Template Integration:

We adopted a unified design template (attached) for all screens. This ensures a consistent look and feel across the app, promoting clarity and professionalism.

Task 2: Add Interactivity

Added Interactivity:

We implemented interactive elements like **buttons**, **drop-down menus**, and **input fields** to ensure smooth data collection from users.

Data Entry Interaction:

Interactivity was embedded directly in the budgeting and planning screens. For example, when a business enters monthly budget or expense categories, the interface dynamically adjusts to show only relevant fields or AI suggestions.
